Check

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

1. **Info** **Trailing slash on void elements has no effect and interacts badly with unquoted attribute values.**

   From line 8, column 5; to line 13, column 6

   ```
   css">↵    <link rel="stylesheet"↵          href="https://cdnjs.cloudflare.com/ajax/libs/font-
   awesome/6.5.2/css/all.min.css"↵          integrity="sha512-
   SnH5WK+bZxgPHs44uWIX+LLJAJ9/2PkPKZ5QiAj6Ta86w+fsb2TkcmfRyVX3pBnMFcV7oQPJkl9QevSCWr3W6A=="↵
   ```

2. **Error** **A `script` element with a `defer` attribute must not have a `type` attribute with the value `module`.**

   From line 15, column 5; to line 15, column 56

   ```
   eet">↵    <script type="module" src="./scripts/main.js" defer></scri
   ```

3. **Warning** **Section lacks heading. Consider using `h2`-`h6` elements to add identifying headings to all sections, or else use a `div` element instead for any cases where no heading is needed.**

   From line 95, column 9; to line 95, column 43

   ```
   ↵↵        <section class="desktop-only hero">↵
   ```

2nd time HTML Validation After Correcting the Errors

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for https://camkem.github.io/sports-warehouse/

Checker Input

Show ☐ source ☐ outline ☐ image report Options…

Check by address

https://camkem.github.io/sports-warehouse/

Check

Document checking completed. No errors or warnings to show.

Used the HTML parser. Externally specified character encoding was utf-8.

Total execution time 22 milliseconds.

About this checker • Report an issue • Version: 24.5.4

CSS Validation – Correct on the first try (All warning pertain the font-awesome style sheet that was included in the browser)

W3C CSS Validator results for https://camkem.github.io/sports-warehouse/ (CSS level 3 + SVG)

Congratulations! No Error Found.

This document validates as CSS level 3 + SVG !

To show your readers that you've taken the care to create an interoperable Web page, you may display this icon on any page that validates. Here is the XHTML you could use to add this icon to your Web page:

```
<p>
    <a href="https://jigsaw.w3.org/css-validator/check/referer">
        <img style="border:0;width:88px;height:31px"
            src="https://jigsaw.w3.org/css-validator/images/vcss"
            alt="Valid CSS!" />
    </a>
</p>
```

```
<p>
    <a href="https://jigsaw.w3.org/css-validator/check/referer">
        <img style="border:0;width:88px;height:31px"
            src="https://jigsaw.w3.org/css-validator/images/vcss-blue"
            alt="Valid CSS!" />
    </a>
</p>
```

(close the img tag with > instead of /> if using HTML <= 4.01)

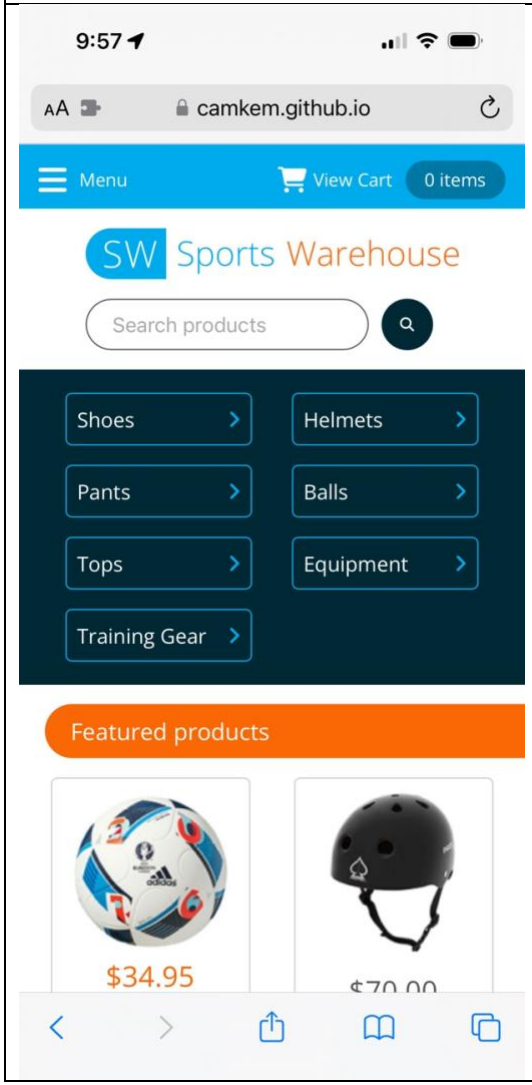
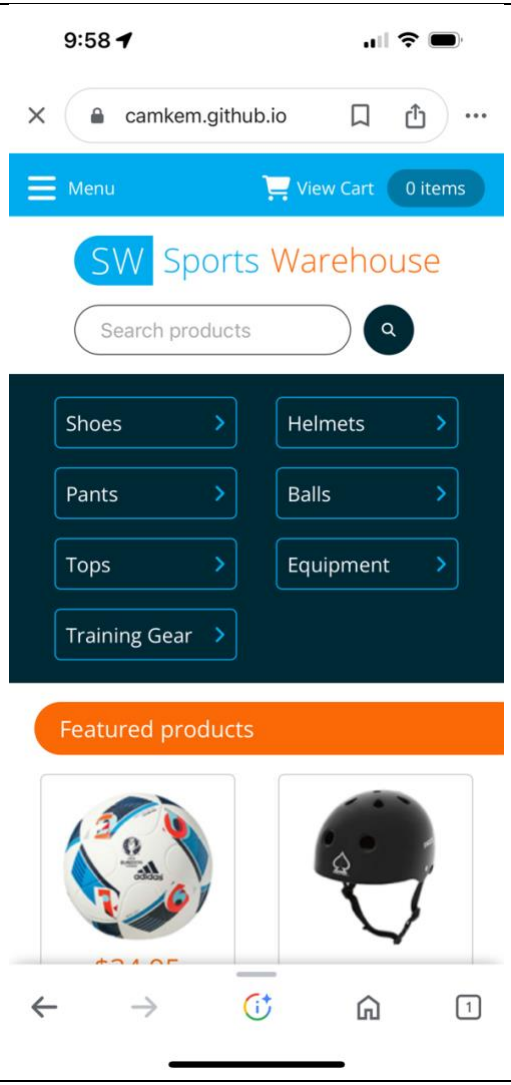
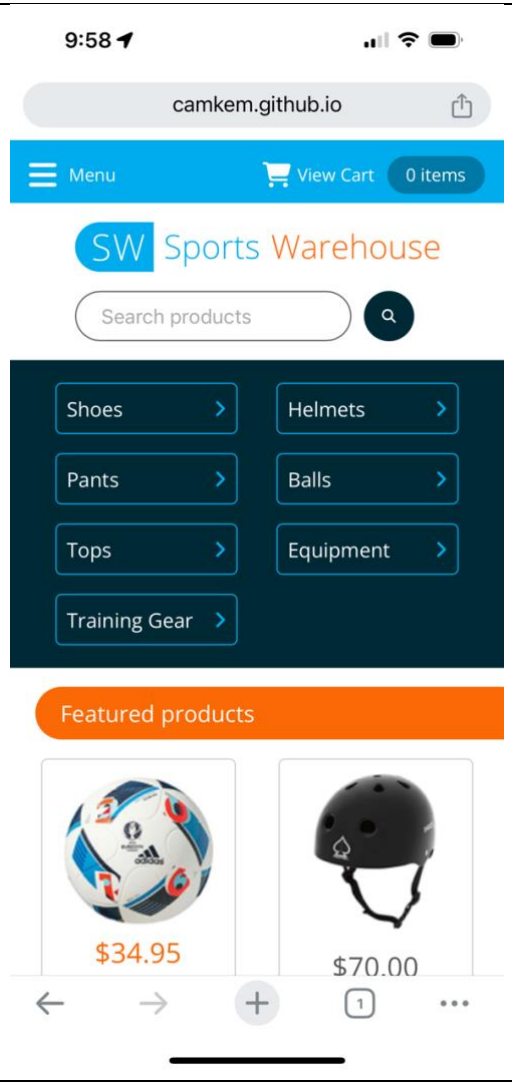
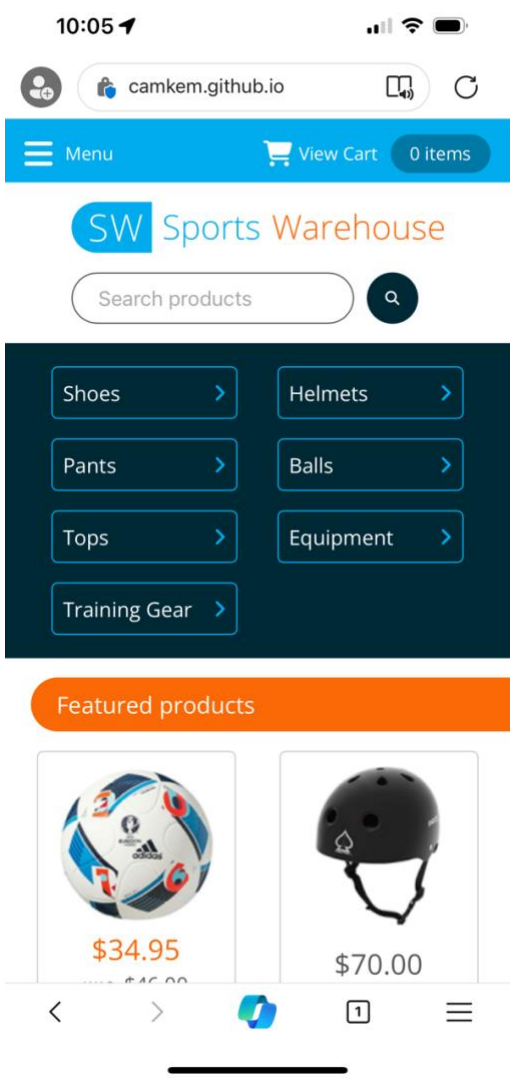
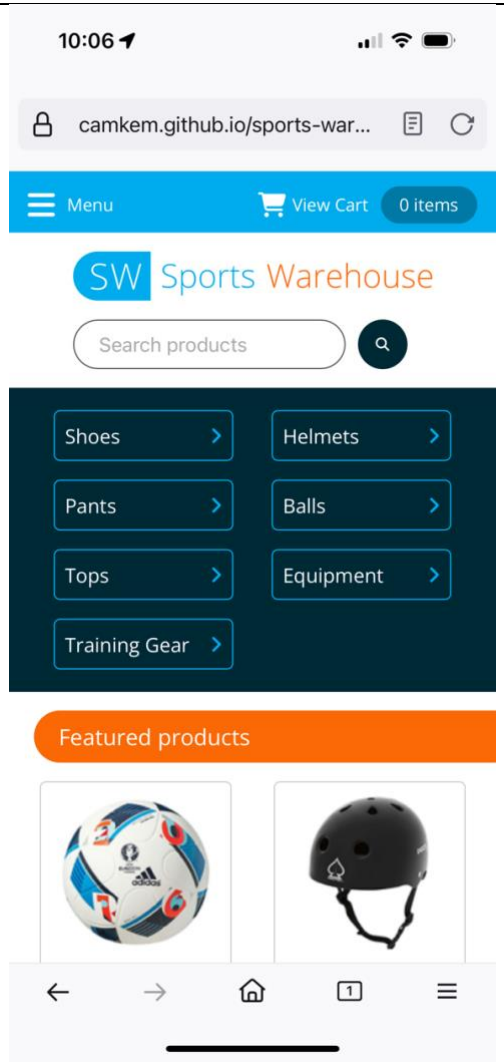
Browser Testing:

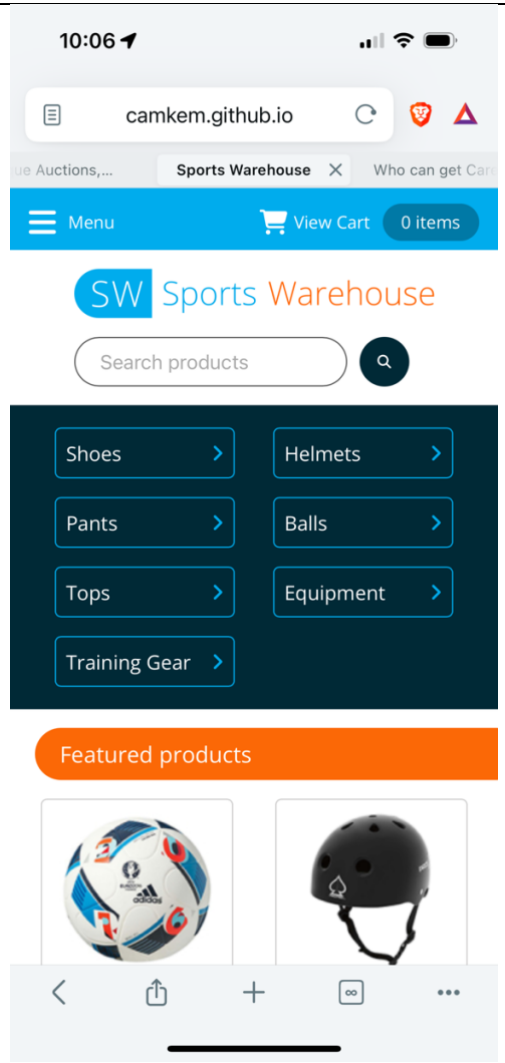
Safari Mobile	Chrome Mobile	Google Browser Mobile
		




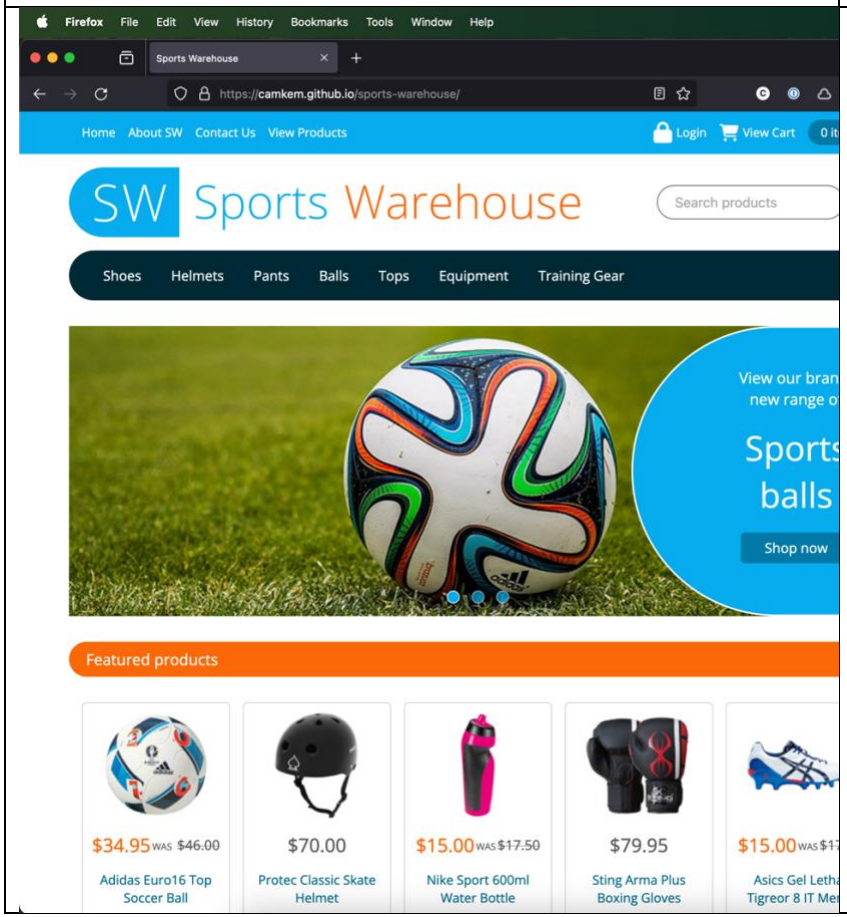


Edge Mobile	Firefox Mobile	Brave Browser Mobile
		






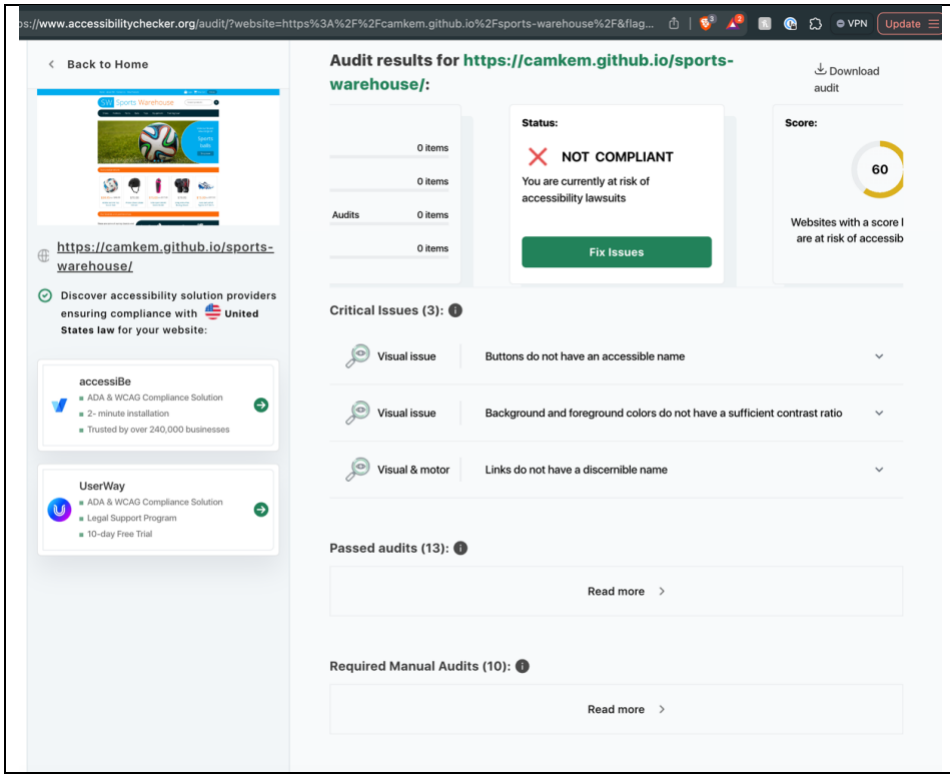
Firefox MacOs	Safari MacOs
	



I had excellent consistency across all browsers & all devices used to test the website once it had been deployed to the production environment. There was no discernible differences between the different browsers across the 2 devices I tested on, which was pleasing to see.

Accessibility Testing:
I used https://www.accessibilitychecker.org/ which uses the WCAG 2.1 to test the accessibility of the website. There was 3 issues.

Firstly I didn't have a valid accessible name on the search button, which I later added name="website search button" attribute which solved the issue. The second issue was related to the design of the website, which is the contrast of 17 elements did not have a sufficient foreground/background contrast ration to allow vision impaired people to be able to clearly discern the content.
Third issue was related to having aria label on all the links, so I added aria label to each of the links for the website.



Hypothetically, if a website is not navigable by keyboard, it can be inaccessible to users who cannot use a mouse.

This can be addressed by ensuring all interactive elements are focusable and can be activated using keyboard events.

Additionally, complex animations or auto-playing media can be problematic for users with cognitive disabilities or those who are susceptible to seizures.

Providing options to pause, stop, or hide such animations can help mitigate this issue.

I created a GitHub Pages project to serve this deliverable, which stores the assets & project files in a GitHub repository and can be found by visiting https://camkem.github.io/sports-warehouse/
